

Student Name/Date _____

Insects

Insects	1
There are many insects in the world. Look closely. Insects have	12
three body parts. They have six jointed legs that help them to get	25
from place to place quickly. Insects have hard shells. The shells	36
protect their inside body parts. Insects have antennas, or feelers,	46
too. The feelers help them locate things to eat.	55
Many insects have two sets of wings. Some insects use their tiny	67
wings to fly. Others prefer to creep on land. Some insects can	79
even swim.	81
There are male and female insects. Baby insects hatch from eggs	92
and grow to become adults. When the insects are grown, they	103
make nests in many places.	108
Some insects help people. They eat trash and things that are no	120
longer alive. This helps to keep the world clean. But sometimes	131
insects become pests. They make nests in places where people	141
work or play. When people get too close, some insects may bite or	154
sting. It is best to leave insects alone and stay away from them.	167

	Scoring Reading Accuracy (60 seconds sample)
Frustration (Below 90%) = 18 miscalls in passage	Total Words in Passage (words read) _____
Instructional (90-94%) = 10-17 miscalled words	Total Errors (miscalled words) _____
Independent (95-100%) = 0-9 miscalled words	Words Correct Per Minute (WCPM) _____
