

1ST GRADE

Hi 1st graders! One of the cool experiments we did in class this year was to make **balloon rockets**. Here is a step by step video to show you how you make your own balloon rocket at home to play with over and over again.

Materials: Balloon, straw, string, tape, 2 chairs

Watch the video with a grown up and follow the instructions together. It's super easy and fun! You can try it with different types of balloons (long or round) and different lengths of string. What works the best?

Enjoy!
